

PRONTO-Xi

Available on Informix Dynamic Server

The Informix Dynamic Server (IDS) relational database from IBM is now available with the release of PRONTO-Xi Phase 6. The combination of PRONTO-Xi and IDS provides unmatched performance and simplicity to optimise your IT infrastructure and run your operations.

Relational databases like IDS are the foundation of Pronto's development roadmap and future innovation. IDS runs on cost effective infrastructure and provides fast data access to meet your business requirements. IDS is part of PRONTO-Xi Foundation.

Hands Free

Designed and optimized for hands-free administration, IDS is perfect for organizations wanting to get more from their information without needing to invest in additional technical support.

Performance and Reliability

IDS has the processing speed required for online transaction applications with the resilience to protect the data and keep applications running. IDS offers one of the best scalable performance metrics in the market for online transaction processing (OLTP), with sites worldwide running tens of millions of transactions through a single data server every day.

Availability is a key benefit in IDS, with features such as continuous log restore, point-time instance wide restore, and table-level backup and recovery. This not only offers significant cost savings but also, with support for cluster solutions, provides scalability to meet growing business demands.

Integration

With its open database connectivity (ODBC), IDS supports a broad range of information management applications with excellent performance and reliability.

Future Development

IDS is a long-term solution with a clear development roadmap and the strong backing of IBM management at all levels.

Key Benefits

- ◆ A fully featured RDBMS
- ◆ A strong history
- ◆ Reliable and secure data storage
- ◆ Flexible, fast transaction processing
- ◆ Virtually zero administration
- ◆ Scalable from a simple configuration to high level clustering and redundancy
- ◆ Standard Open Database Connectivity (ODBC)

Technology

- ◆ Informix Dynamic Server is fully integrated into the Pronto-Xi Foundation
- ◆ Multiple Platforms: IBM AIX, Red Hat Linux

*“As an integral element of IBM’s data server business,
the future for IDS is very bright”*

Ambuj Goyal, General Manager, Information Management Software - IBM

About PSA Inc.

As a leader in the enterprise software services industry, PSA Inc., is known for its dedication, professionalism and its comprehensive business knowledge. PSA specializes in providing value added business solutions that are aligned with its clients' goals and expectations. Experienced resources are at the foundation of the PSA organization. With over 300 years of combined experience, our resources have worked in every phase of the enterprise software cycle while also providing 'Best Practices' expertise that remains unmatched in the industry.

PSA is proud to have assisted hundreds of businesses across Canada and the United States in reducing operating costs, improving operating efficiencies and gaining competitive advantages in their marketplaces.
