

# Pronto Xi ERP Software for Mining

Increase control, visibility and efficiency for your Mining Operations.

TOP TEN REASONS TO SELECT PRONTO XI

# A proven all-around solution for mining.

Pronto Xi ERP Software fits the entire lifecycle of a mine — from exploration, construction to commercial production. Hundreds of mining, oil and gas companies use Pronto Xi ERP software to: increase production with powerful demand and resource planning; boost reliability with predictive and condition-based maintenance monitoring; deliver clarity with accurate financial and operational reporting for reconciliation – all while supporting decision making with Business Intelligence insights and KPIs.

# Top Ten Reasons to choose Pronto Xi for Mining.

Mining companies looking for a comprehensive ERP solution should take a close look at Pronto Xi ERP Software for these and the many additional benefits it offers:

1

## Proven to meet the needs of the mining industry.

Pronto Xi ERP software is an established player in the global mining community. With over 450 mining and mining suppliers currently using Pronto Xi, it has proven strength in its financial, project and asset management support. Ideal for producing mines, junior mining, and mining suppliers, Pronto Xi helps companies meet the practical challenges of reducing operating costs and improving production efficiencies to achieve profitability.

2

## A quicker return-on-investment (ROI) through rapid deployment.

PSA offers mining clients a rapid deployment for quick implementation and increased ROI. The ERP software implementation follows a proven templated-path that takes the best of mining business processes and rolls them into a pre-configured ERP software deployment that remains flexible for change and improvement.

Characteristically, an ERP rapid deployment will take 30 – 50 % less time than a traditional ERP implementation. Taking into account size and complexity, mines in their startup phase have adopted a fully functioning ERP solution in less than 12 weeks.

3

## A single fully integrated solution: mining-operations-corporate.

Fully integrated Pronto Xi modules translate into the seamless management of your corporate, exploration, mining or operation's activities. With Pronto Xi's extensive core functionality that is built in to the application, there is no need for add-ons or interfaces. Pronto Xi takes care of all your mining needs in a single solution.

# 4

## Reliable remote connectivity.

Pronto Xi works well in low bandwidth, high latency communications through powerful real-time connectivity that benefits even the most remote locations with its in-depth functionality. Decision-makers can view collected data that is immediately available from across the organization — from corporate to mine to operations.

# 5

## Global operations management.

Multi-currency, consolidations and advanced financial reporting make Pronto Xi suitable for geographically diverse mining organizations. Users can increase visibility of their global operations with tools that can provide data quickly for informed decision-making.

# 6

## World-class maintenance management, including preventative and predictive asset management.

Pronto Xi not only helps to maximize utilization and productivity of mining equipment, it also reduces disruptive breakdowns and maintenance costs through predictive and preventative maintenance functionality. Pronto Xi's Maintenance Management is built in to the core application to provide full control of your assets, including the costs involved in maintaining them.

# 7

## Accurate project management and costing.

With Pronto Xi, users can manage project details with accurate resource, expense and income tracking to ensure projects are on time and on budget. Pronto Xi Project Costing can handle project hierarchies, multiple cost centres, multiple customer invoicing against projects, charge out by cost category, profit take-up and release, and more.

8

## Reduce upfront software costs with flexible deployment.

Pronto Xi ERP software offers flexible deployment options powered by PSA Cloud Solutions that enable mining companies to gradually expand their ERP and reduce upfront software and implementation costs. Mining companies can stage their investment with financial implementation and turn on functionality as their mining operations grow through the exploration, mining and production phases.

9

## Compliance.

Pronto Xi ERP Software meets SOX, IFRS and US GAAP compliance requirements to ensure that corporate regulatory obligations are satisfied.

10

## Improve your business insight with IBM Cognos.

Corporate performance management and business intelligence are vital for mining companies reporting results to shareholders. Pronto Xi has built-in business intelligence tools running on IBM Cognos Analytics for real-time reporting of mine performance.

Unlike other offerings, PSA also offers mining specific pre-built reporting that elevates business visibility in key areas like maintenance, project costing, and mine operations.

# Comprehensive Mine Management

Pronto Xi ERP Software's fully-integrated and comprehensive solution provides tools for complete management of your mining company.
